5.3 – Project Progress Tracking

I am working on a project to track the progress of Agricultural Crop Production Analysis in India using Tableau. I found that Zoho Cliq is very helpful in managing this project. The biggest problem we face is switching between apps to communicate and track the project. A study by Business Wire says that 69 percent of workers waste up to one hour every day moving between workplace apps. Zoho Cliq solves this problem by combining communication and project management in one place.

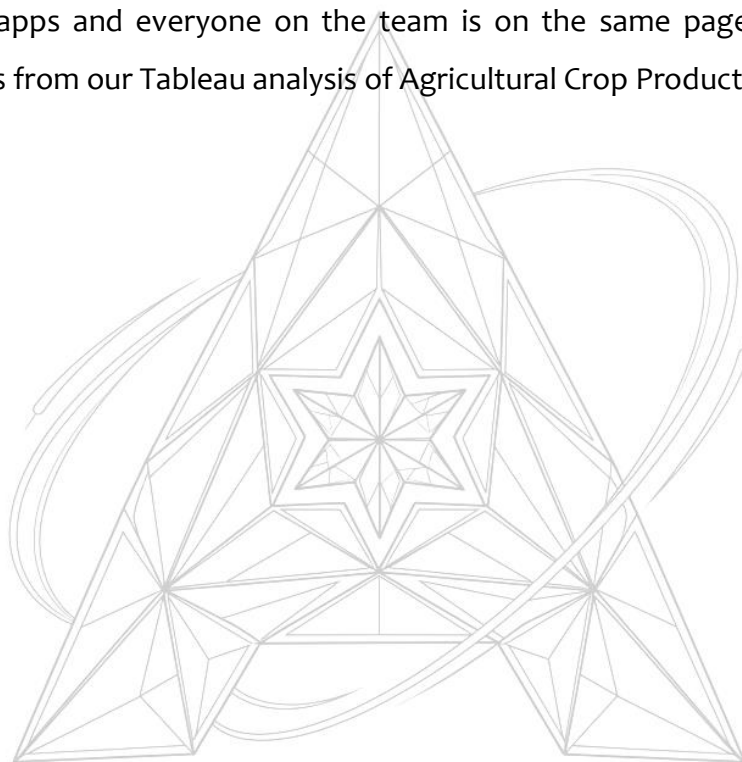

My project has phases. Data Collection, Data Connectivity, Data Preparation, Dashboard and Story Creation, Tableau Public Upload, Web Integration, Documentation, Demo Video Making and Project Deployment. This project will take 18 days to complete. Each phase needs planning, timely execution and good collaboration among team members. Zoho Cliq is the tool that helps us with this entire process.

One of the features of Zoho Cliq is that I can associate my project with a dedicated channel. This way I can. Manage tasks without losing track of what we are discussing. My team members can assign tasks for each project phase from the chat window. We can also convert action items from conversations into tasks. If we have a paid plan for Zoho Projects we can see the progress of our sprint and task statuses in the chat interface.

We also get notifications in time when a task is updated, assigned or completed. This helps us track deadlines. We can save messages and categorize them for quick reference later. Zoho Cliq also allows us to share files, which's very helpful for sharing datasets and documentation. We can have audio and video calls to discuss problems.

My team members can use polls and surveys to get feedback on dashboard designs. This helps us make decisions together. The chat history is like a record of what we have done. We can search for past conversations and solutions easily. Zoho Cliq works with other Zoho tools, which helps us with time tracking, milestone management and resource allocation.

This makes project tracking easier and more transparent. Now we do not have to switch between apps and everyone on the team is on the same page. We can focus on delivering insights from our Tableau analysis of Agricultural Crop Production, in India.
