PROJECT TITLE	India's Agricultural Crop Production Analysis using Tableau
MAX MARKS	1 MARK

5.4 – Team Management Tool for Agile Planning (Jira)

Jira was used as the Agile project management tool to plan, organize, and track the development activities of the India's Agricultural Crop Production Analysis project. It helped the team manage tasks efficiently by dividing the project into smaller activities and monitoring their progress through different stages of development.

Key Features of Jira

- **Sprint Planning:** Organizes project work into sprints with defined timelines and objectives for agricultural data analysis.
- **Task Management:** Creates, assigns, and tracks tasks with priorities and deadlines for data collection, preparation, and visualization.
- **Kanban & Scrum Boards:** Provides visual boards to monitor task progress through To Do, In Progress, and Done stages.
- **Issue Tracking:** Records bugs, issues, and project challenges related to Tableau dashboards and data processing for quick resolution.
- **Real-Time Collaboration:** Enables team members to update task status and communicate effectively on agricultural data insights.
- **Progress Monitoring:** Displays project progress through dashboards and reports for better decision-making.
- **Workflow Automation:** Automates repetitive activities such as status updates and notifications for efficient workflow management.

Workflow of Jira in the Project

1. Project Planning: Define project objectives such as analysing crop production trends across Indian states and create Agile sprints with clear goals.
2. Task Creation: Break the project into smaller tasks including data collection, data preparation, data visualization, dashboard development, story creation, performance testing, web integration, and deployment.
3. Task Assignment: Assign responsibilities to team members with due dates and priorities for each agricultural analysis activity.
4. Sprint Execution: Team members work on assigned tasks such as cleaning agricultural datasets, building Tableau visualizations, and update their progress regularly.
5. Progress Tracking: Monitor task status using Jira boards and dashboards to ensure timely completion of all milestones.
6. Issue Resolution: Identify and resolve technical issues related to Tableau dashboards, data processing errors, district boundary changes, and website integration challenges.

Benefits of Using Jira

- Improves project planning and organization for agricultural data analysis projects.
- Enhances collaboration among team members working on data preparation and visualization.
- Provides real-time visibility of project progress and milestone completion.
- Simplifies task assignment and responsibility tracking for complex agricultural datasets.
- Helps identify and resolve issues like missing data and dashboard performance bottlenecks quickly.
- Supports Agile methodology through sprint planning and management.
- Increases productivity by organizing work efficiently across all project phases.
- Ensures timely completion of project milestones and deliverables including dashboards and stories.
