

CHAPTER – XI

FUTURE SCOPE

11.1 - Future Scope

The Indias Agricultural Crop Production Analysis using Tableau project is a beginning with a lot of room for improvement. If we add Artificial Intelligence and machine learning to the project it will be able to tell us what might happen in the future and give us advice on what to do. This is called prescriptive analytics. The project will be able to give us forecasts of crop yields and tell us what actions to take.

Research shows that some models can predict rice yields up to five years ahead of time. If we put these models into the Tableau dashboards policymakers and farmers will be able to make decisions before things happen.

The Indias Agricultural Crop Production Analysis using Tableau project can also be connected to time agricultural platforms and national initiatives like the Landscape Crop Assessment Survey. This will give us detailed information about what is happening at the field level. If we connect the project to government schemes and subsidy programs farmers will be able to get the benefits they're eligible for directly.

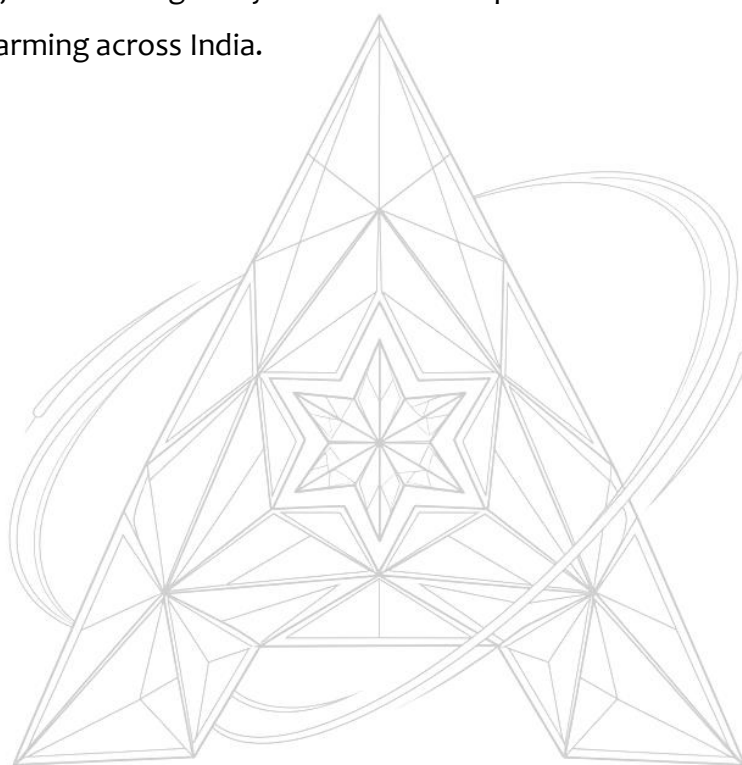

The Indias Agricultural Crop Production Analysis using Tableau project will be even better if we add types of data, such as satellite remote sensing for crop health monitoring and real-time market prices. This will give us a picture and help farmers choose crops that are viable and profitable.

If we make a friendly platform farmers in remote areas will be able to use it easily. The Indias Agricultural Crop Production Analysis using Tableau project will also be improved if we add integration, with soil sensors and weather stations. This will allow for precision agriculture.

India's Agricultural Crop Production Analysis using Tableau

The Indias Agricultural Crop Production Analysis using Tableau project can use climate change models to suggest ways for farmers to adapt to the changing climate. If we add a way for farmers to give us feedback, we will be able to keep improving our predictions.

All these advancements will make the Indias Agricultural Crop Production Analysis using Tableau project an intelligent system that will help with sustainability, food security and climate-resilient farming across India.
